

SURGICAL ANTISEPTIC TRAYS

4 & 2 SPONGES 0.05% CHG

Surgical antiseptic sponges impregnated with an aqueous antiseptic solution of 0.05% w/v Chlorhexidine Gluconate, the new and economical solution for skin antiseptics trays.

Cubic sponges impregnated with the most widely used antiseptic for asepsis of mucous membranes and wound cleaning while reducing overall skin prep costs. Using antiseptic trays ensures the integrity of the antiseptic solution because of its unidose presentation.

CHARACTERISTICS

- Available in 4 sponges and 2 sponges impregnated with an aqueous antiseptic solution of 0.05% W/V Chlorhexidine Gluconate
- Available in clear solution
- Ideal for asepsis of mucous membranes and wounds cleaning
- Antiseptic not affected by contact with organic matter, unlike iodine solutions
- Non-irritating antiseptic solution
- Hypoallergenic and fragrance-free antiseptic, not absorbed through skin
- Soft surgical-grade sponges gentle on skin releasing fewer particles than cotton or synthetic gauze
- Easy to use, this product reduces handling in the operating room, sterilization department and pharmacy
- Eliminate risk of possible contamination associated with opened bottles of antiseptic solutions
- Significantly reduce cost of patients' skin preparation before surgery
- Latex-free product

INDICATIONS

- Recommended for asepsis of mucous membranes and wounds cleaning
- Convenient design for use in operating rooms, obstetrics, out-patient clinics, emergency rooms and care units
